Project Outline

Design Thinking

Identify the **Main Issues**

Current Situation (The Pain Points)

- Raw material shipment data is managed manually using daily Excel files (“save as file”).
- **Accessibility Issues:** Only one user can access or edit the file at a time, so the PIC/Buyer must wait in line to update the data.
- **Time Inefficiency:** Users spend 40-60 minutes a day just to update data and share files.
- **Monitoring Limitations:** Data cannot be visualized or tracked in real time.

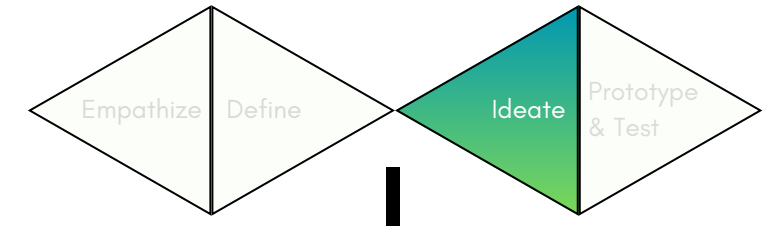

Core Problem (Based on 5 Whys Analysis)

- The PIC or buyer must wait their turn to access/update data, and there is no real-time data visualization.
- This is because data is managed manually using Excel, without an integrated digital platform for collaborative work.

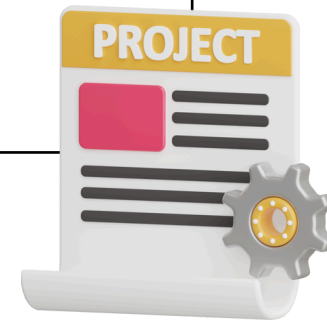

Project **Solutions and Targets**

Solution Concept (Project Objective)

Creating a system that supports simultaneous access, monitoring, and visualization of shipping data in real time.

System Requirements:

A system that allows multiple users to input and update data simultaneously and visualize data in real time to monitor cargo shipments.

Process Improvisation

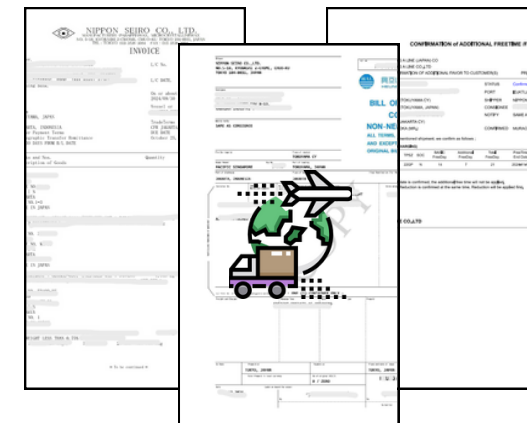

Replacing manual daily processes with real-time database input and updates

Replacing processes without visualization with interactive data visualization

Target reduction in processing time from 40-60 minutes to 7-15 minutes

Resources needed

3 Select the data to be Arrangement

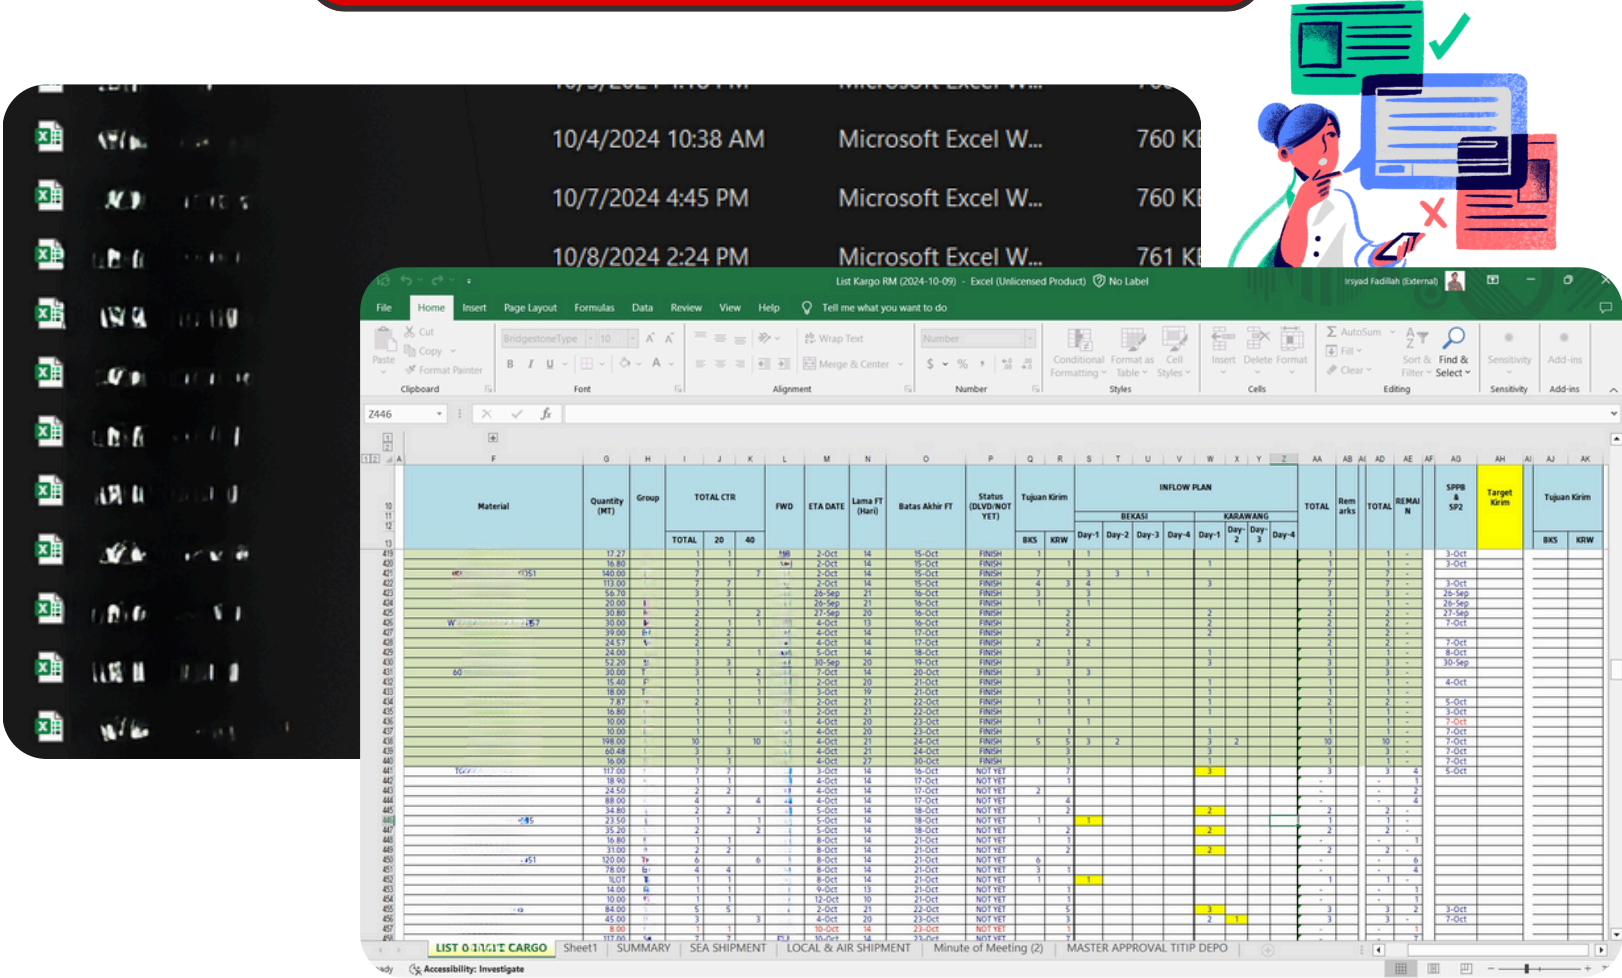

Workflow in monitoring the input and update process and data visualization

Project Results and Impacts

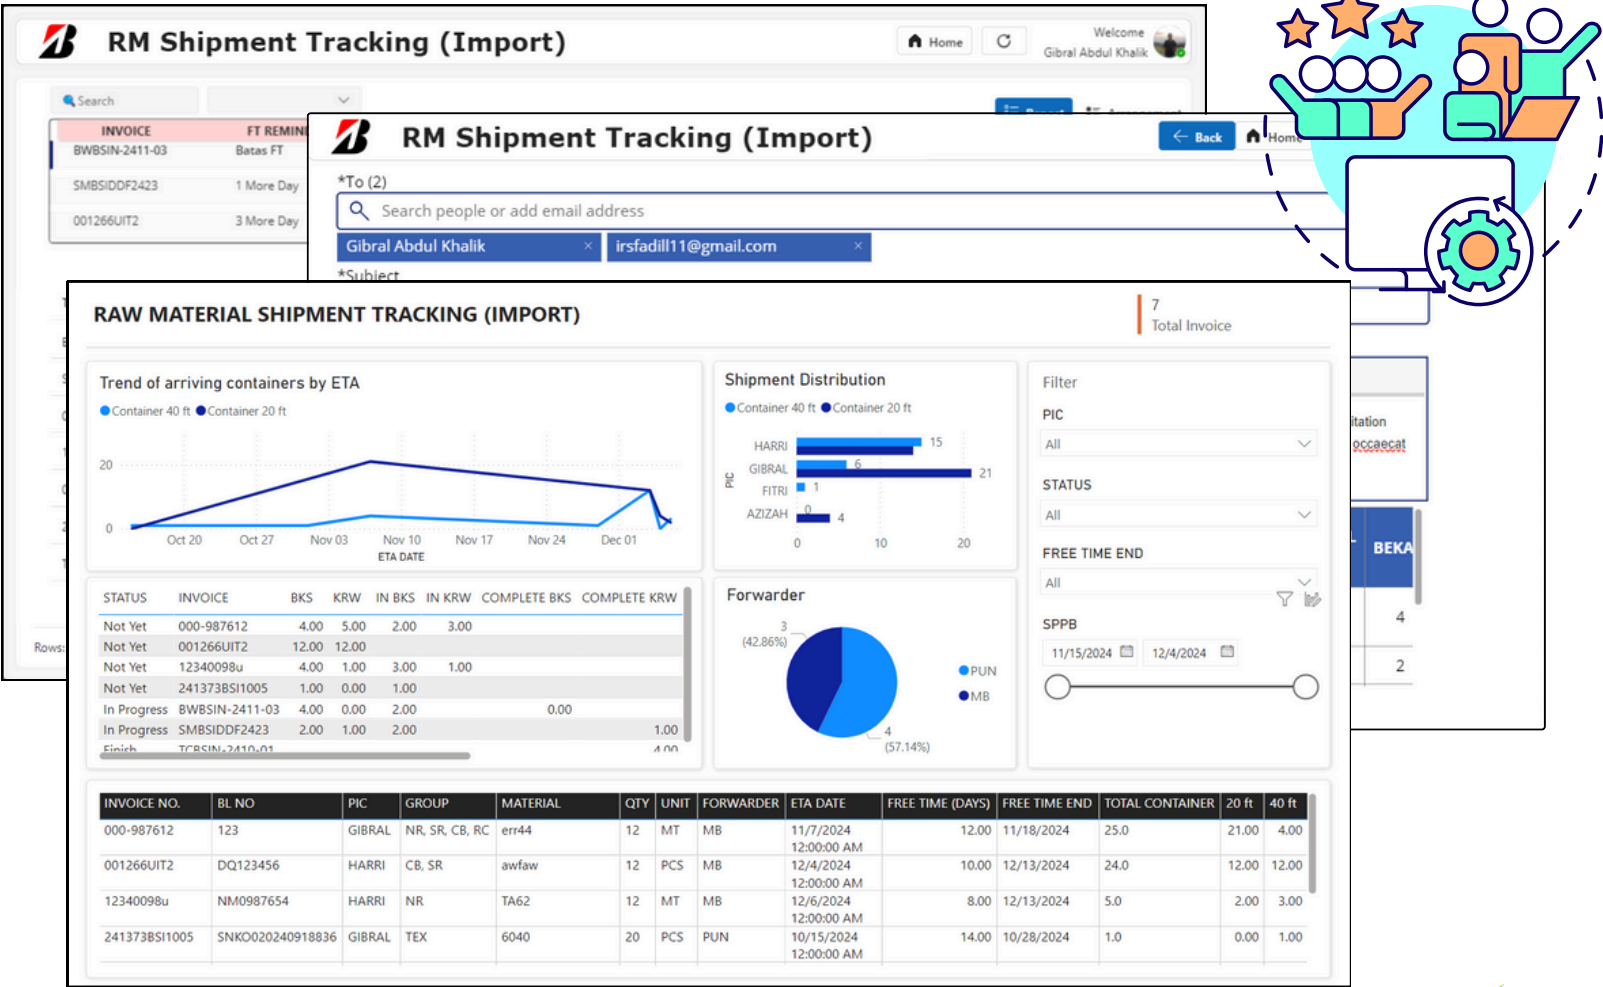

Then

- Daily cargo data managed with save as file
- PIC/buyer waited to access or update
- Processing time: 40–60 minutes.

Now

- System enables simultaneous access
- Provides interactive data visualization
- Processing time: 7–15 minutes.

Impact: Reduced time, easier to gain insights, and Improved data accuracy
